Agility Life Sciences forge Strategic Partnership with Solitek

This partnership will allow both companies to offer a larger portfolio of services to their clients.

Barcelona, 27th March 2023 – News release content.

Agility Life Sciences, an award-winning formulation development CDMO based in Nottingham, UK, and Solitek, experts in solid state development services for the pharmaceutical, agrochemical and fine chemical industries based in Barcelona, Spain, have entered into a Strategic Partnership agreement in order to accelerate the pharmaceutical development milestones of their clients.

The agreement will see Agility Life Sciences signpost and recommend Solitek's solid state services to clients, with Solitek reciprocally promoting Agility's formulation development services. The two organisations have also agreed to provide training on their products and services, as well as offering technical support and client liaison.

Agility Life Sciences CEO, Prof. Claire Thompson, commented: "I am thrilled to sign our first Strategic Partnership agreement with Solitek, who have a combined experience of nearly 50 years in the pharmaceutical industry, including over 40 years in the world of solid state research and crystallisation development. Partnerships are vital in this industry, and I am confident that both companies will strengthen each other's client base in a mutually beneficial arrangement. I am excited to begin this new chapter of collaboration."

Solitek co-founder and Operations Director, Víctor Díaz, added: "this partnership is a critical steppingstone in our ambition to offer a full preclinical development services portfolio". Victor also added that "having worked with Claire before, I am convinced that Agility Life Sciences are the right partners to learn and to grow with. Solitek and Agility Life Sciences form a very strong partnership with a level of specialization and expertise difficult to match", concluded..

About Solitek

Solitek combines an excellent understanding of the diversity of the solid form landscape exhibited by small APIs with the experience and the practical know-how to add value to new chemical entities, thus increasing their chances of making it all the way to the market.

We focus solely on what you need here and now, to help you move to the next stage in your development strategy. We offer stage appropriate development for each programme, focusing on problem solving to help our clients reduce the risk of failure during the later development stages and maximising the returns from potential in-licensing partners.

Contact Solitek at victor.diaz@solitekpharma.com for a new level of excellence in solid form services, combining quality with rapid response and full provision of all the scientific data.

About Agility Life Sciences

Agility Life Sciences is an award-winning formulation development CDMO, with a global client base ranging from spin-outs to multinational organisations. We use our “Fast Futureproof Formulations” approach to give our Clients’ badly behaved molecules the best chance of success in preclinical studies and enable them to be accelerated to clinic or commercialisation. Our formulations specialisms include oral, ocular, intravenous, intranasal, topical and subcutaneous products. We develop and manufacture formulations to meet the needs of our clients including:

- Overcoming solubility and permeability issues
- Immediate, controlled and sustained release
- Formulations and analytical methods suitable for preclinical safety and efficacy studies, including GLP tox studies
- Clinical and commercial prototypes
- Reverse engineering of existing products

Contact us at claire.thompson@agilitylifesciences.com to find out how we can help accelerate your milestones and futureproof your products.
